

PRAIRIAL

singlepass

MEADOW PREPARATION

3 in 1 pass

- Adjustable knives on flat leaf spring 80 x 12 to bear significant stresses
- Serrated blades for maximum aggression when leveling molehills and spreading manure with a harrow

WORKING PARTS

- Adjustable leveling - adjustment of cutter depth by push bar with screws
- Adjustment of wheel depth by a screw handle
- Adjustment of the harrow depth by sector pin
- Reversible cutters

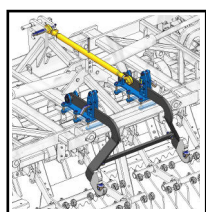

THE CHASSIS

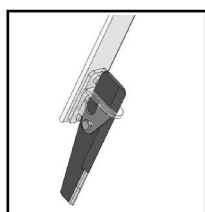

- 3-point coupling with anti-rotation pins, entirely mechanically welded to prevent play. Cat I/III
- RHS Frame, 100 x 8mm, 120 x 60 x 8 and 200 x 100 x 5 mm, designed to resist the heavy stresses required for use on meadows
- 4 tubular bars 70 x 5 with high elastic limit, including 2 mounted on a pivot
- Nylon bushes
- Independent floating wing section
- Easy adjustment of depth control wheels by screw handle with graduated rule

- Stand for parking the machine in the folded position
- Transport width 2.5m
- Mounting cutter and leveling blades on 80 x 12 flat spring tines makes it possible to bear significant stresses
- Optional mounting of carbide cutters
- Transport lock
- 3 stands with automatic locking
- Hydraulic safety on cylinders of folding models

OPTIONS

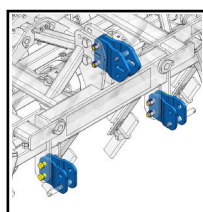

• 3-point mechanical lift for SARCLERSE

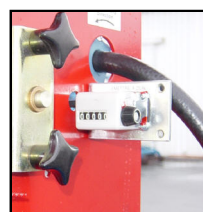

• Non-reversible carbide cutter for abrasive soils

• Double cutter to increase the density of scarification

• Advanced coupling to adapt to tractor constraints

• Unit counter on SEMLOC to report the surface worked

• Unit counter on wheel to check the surfaces worked
